1 week

1 day

Planning	Requirement	Design	Development	Testing	Deployment

Planning all the modules and features which are going to implement

Decided what are the software and tools we need and install the required resources

Design all the modules like login page, dashboard, Academic details form etc

Develop the predictor which uses the previous dataset and academic details of the student. In this phase we use some algorithm for prediction

Test the e model if we face any error we debug the error

Finally we submit the project in github
